BETTERMANN

Building Connections

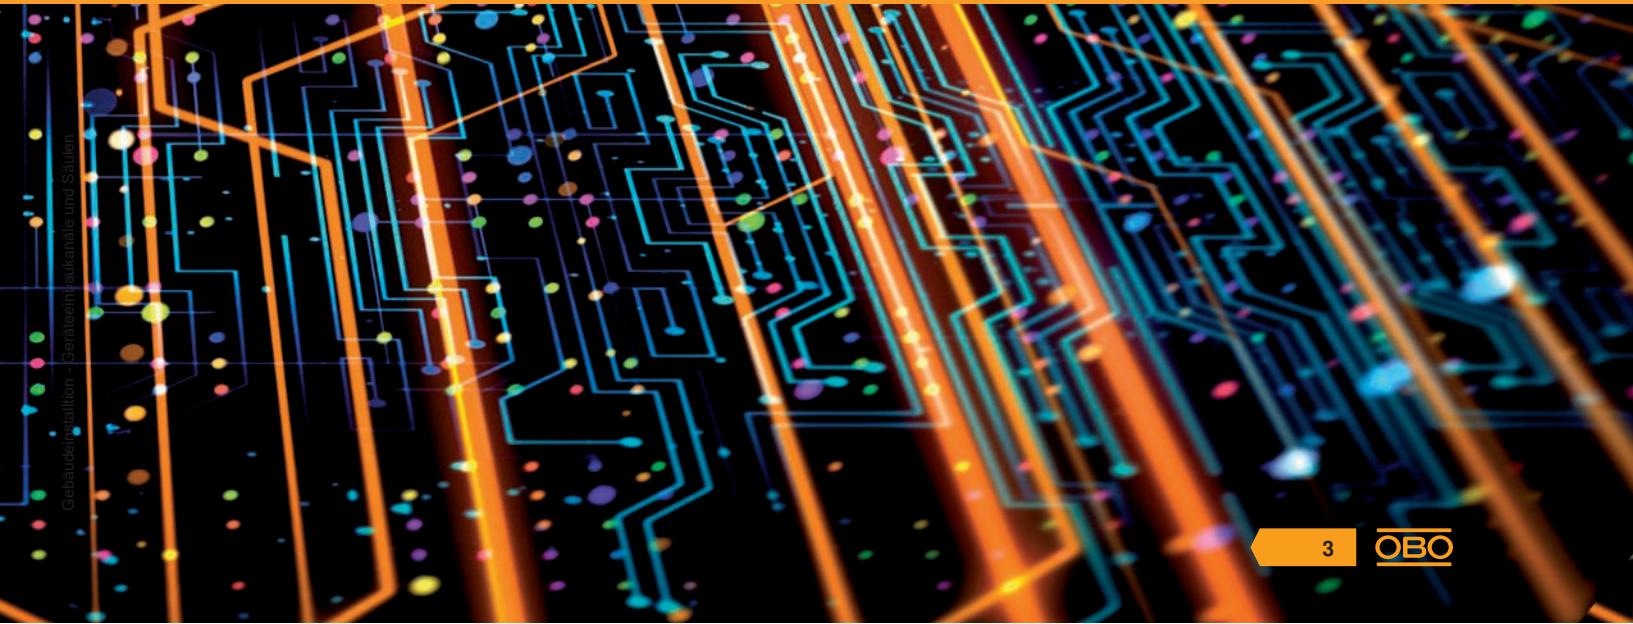

Digitalisation, the Energiewende (energy transition), mobility – the future is gathering speed. At OBO Bettermann, we're proud to be a driving force. And as a facilitator, we make connections. Today, we are already developing the innovative electrical infrastructure systems and solutions of tomorrow. Reliably, flexibly, sustainably.

Already today, OBO is one of the leading manufacturers of installation systems for the electrical infrastructure in buildings and plants. When it comes to the friction-free flow of power, energy and data, engineers and tradespeople worldwide rely on the comprehensive range from OBO.

OBO applies its slogan "Building Connections" to around 30,000 high-quality branded electrical products and services, which are used in application solutions for projects in industry, business and infrastructure.

OBO operates a global network and employs more than 4,200 people in more than 60 countries. The headquarters of the family company, which was founded in 1911, is located in Menden, Germany. In addition, more than 40 subsidiaries are present in markets on all continents.

Improved structure, sharpened profile

Each of our products carries a benefit which only the OBO brand can offer. Products are developed, manufactured and tested with a high level of competence – from the idea through to the final check. From flawless logistics through to practical information – we can provide support at every level. We can offer additional security through certificates on the conformity of our products with the most important standards and directives. In a nutshell – OBO helps you more. In every location and in every phase of a project.

To maintain this, we continually challenge ourselves. Not as an end in itself but for the better processing of each customer's requests – fast, reliably and future-oriented. That is the reason we have not only established our three central application areas, but also reworked our catalogue structure. In this way, we can display our service offers more clearly, highlight the product benefits more effectively and illustrate the respective application areas more tangibly.

OBO Product Worlds

Industrial installations

- Cable support systems
- Connection and routing systems
- Fastening material

Building installations

- Cable routing systems
- Device installation ducts, trunking and poles
- Floor installation systems and underfloor applications
- Installation systems

Safety and protection installations

- Surge protection
- External lightning protection
- Equipotential bonding and earthing
- Insulation and cable bandages
- Fire-tested support and routing systems
- Fire protection ducts

It's your choice – from now on there's a catalogue for each OBO product category. Simply select the catalogues and order together with a collection case.

Always at your service

If you have questions about products, installation or planning – OBO staff offer exceptionally competent support at each and every phase of your project. So that you are always on the safe side.

- Product and system information, digitally or printed
- Selection and planning aids on the web, as a CAD application or in printed form, as well as in the myOBO app
- 2D and 3D product data for planning
- Field service and branch offices in 60 countries
- Engineering services for major projects

OBO Construct: Planning has never been so easy!

OBO Construct is a collection of planning tools that were developed especially for electrical installation engineers and planners. This platform offers support in product configuration and a selection aid for the matching systems, and automatically generates a corresponding parts list. With OBO Construct, you can therefore access and edit projects at any time and at any location – via your smartphone, tablet or desktop PC. Versions of the app are available for iOS and Android.

OBO Academy: From the basics to the concrete application

The OBO Academy has been offering an extensive further education programme for many years. This programme helps with first-hand information and expertise, giving you that essential head start in terms of in-depth knowledge. In our seminars, planner days or online seminars, we provide you with current developments, trends, norms and regulations – systematically, comprehensively and practically oriented.

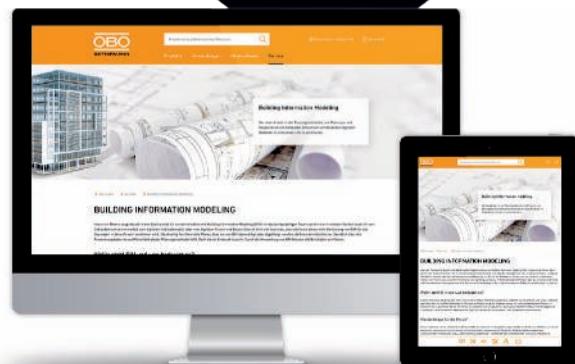

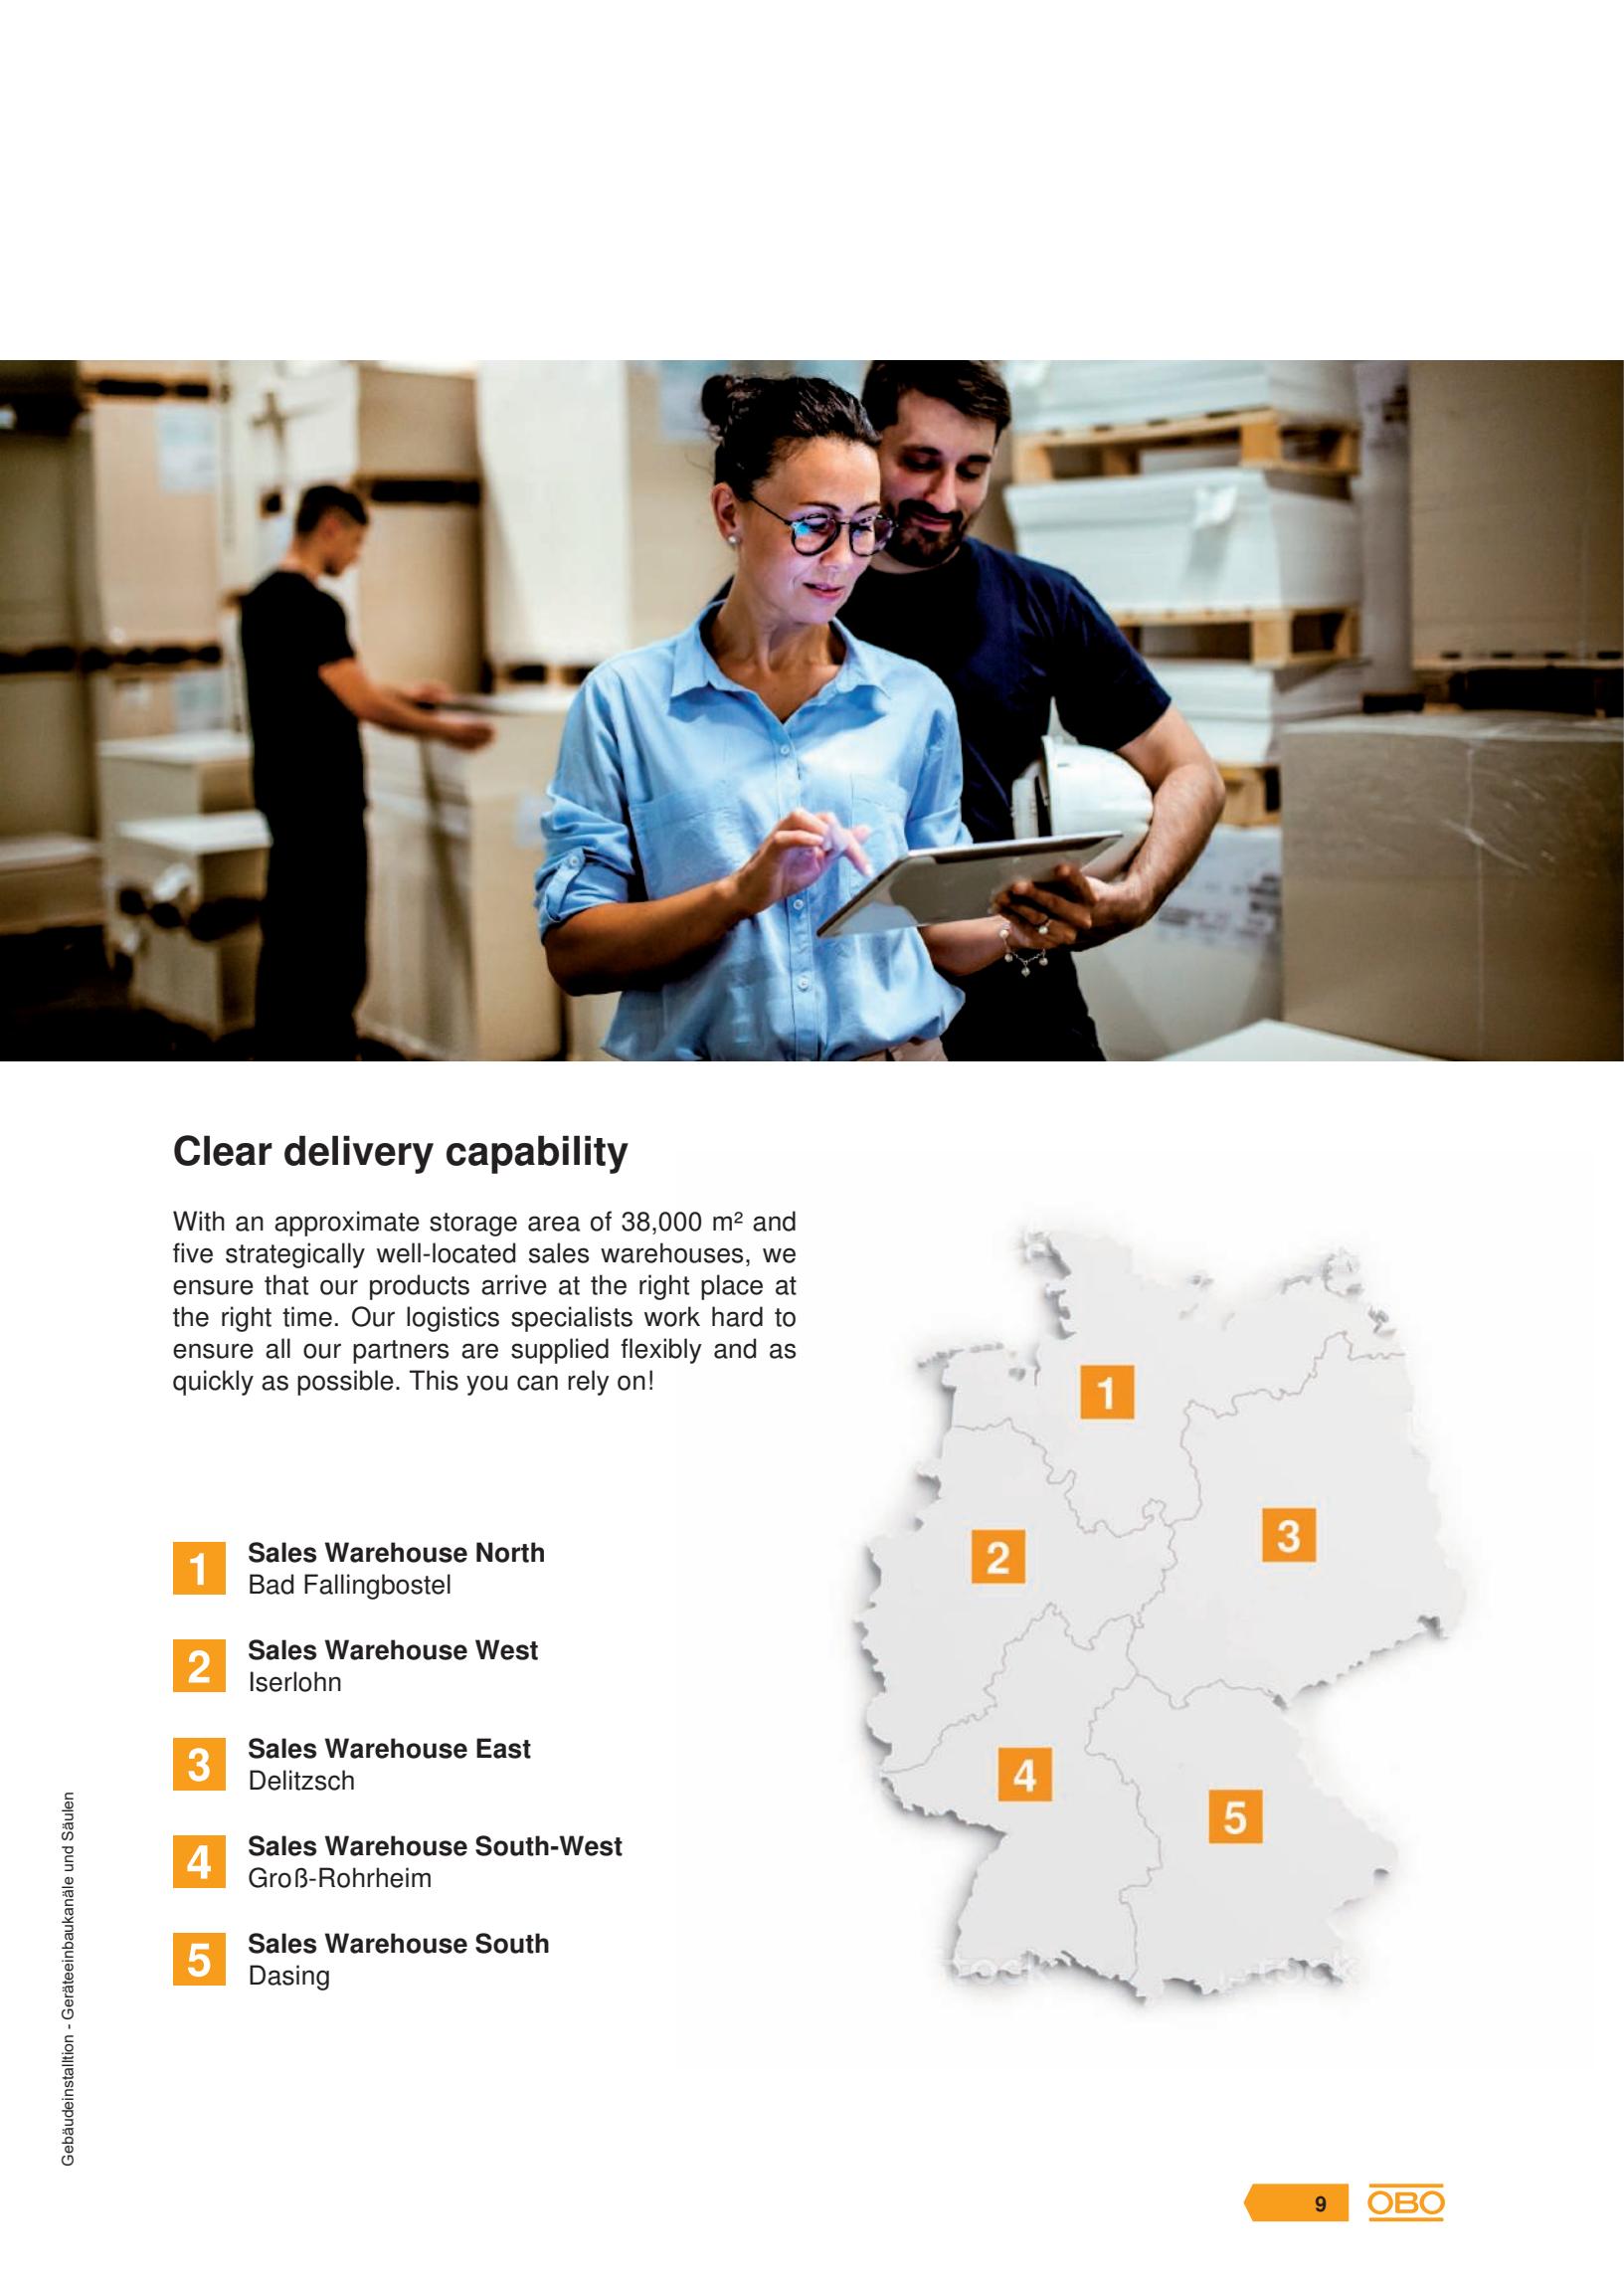

Planning virtually, implementing efficiently

When planning and implementing electrical technology, BIM (building information modelling) is becoming increasingly more important. We can now offer our partners the first solution to unlock the full potential of the BIM method for practical applications - giving you more planning efficiency, transparency and cost security with complex projects. Find out about the advantages of BIM@OBO now:

- Intelligent libraries structured according to individual systems
- Available for Revit, as a plug-in and directly via the OBO website
- Simple integration via drag & drop
- Practical display of material lists for ordering directly
- Intuitive user interface

You can find further information at obo.de/BIM.
Welcome to the future!

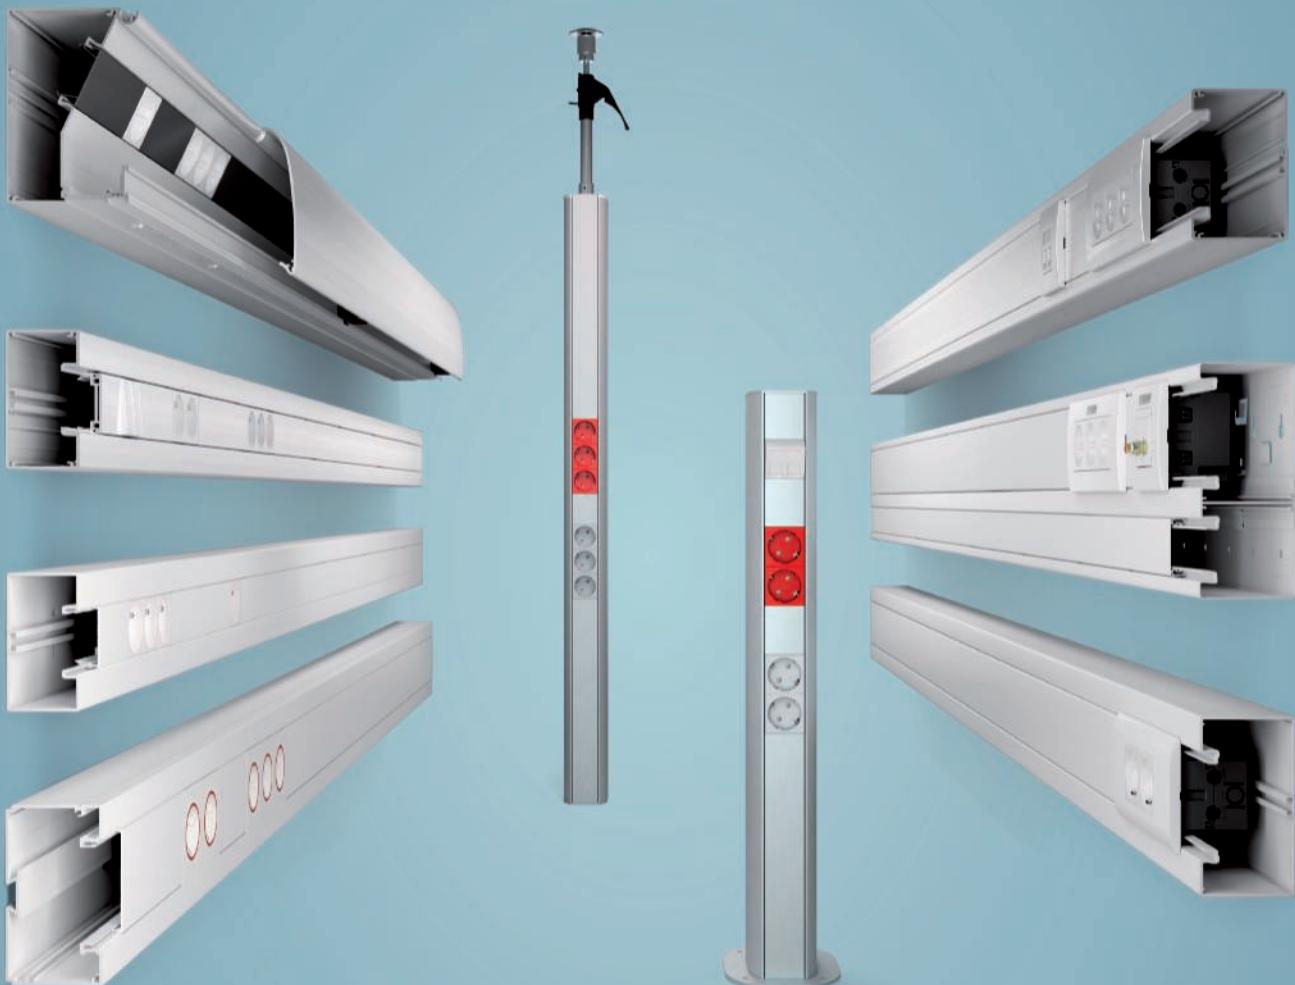

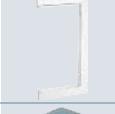

Clear delivery capability

With an approximate storage area of 38,000 m² and five strategically well-located sales warehouses, we ensure that our products arrive at the right place at the right time. Our logistics specialists work hard to ensure all our partners are supplied flexibly and as quickly as possible. This you can rely on!

Specifications for safety measures

If there is a fault, touchable metallic parts must not carry voltage. For this reason, it is necessary to carry out appropriate safety measures. These are specified in the currently valid standards. For the creation of device installation trunking systems the standards DIN EN 50085-1 and DIN EN 50085-2-1 apply, for the installation itself the erector regulations DIN VDE 0100 Part 410 and 540 (safety measure against dangerous shock currents) are applicable.

Different installation types in the European standard

The European standard DIN EN 50085-1 takes different installation types into account, as they are used in different countries within the EU. While only equipotential bonding testing was previously required for installation trunking systems, now the listed component standards also require protective conductor functions. This is because, in some countries, it is possible to route insulated cable in trunking.

All metallic components must be included

DIN EN 50085-1 requires that all the metallic components can be included in the protective measures. The manufacturers must carry out the appropriate tests and document them. OBO installation trunking is also tested and certified by an external testing office – that of the VDE.

Testing the effectiveness by the installation engineers

The erection engineer (installation engineer) must test the effectiveness of the protection measures in accordance with DIN VDE 0100 Part 610 after completion. The tightening torque of the contact screws on the earthing terminals and the proper mounting of the couplings must be ensured.

Continuous protection measures

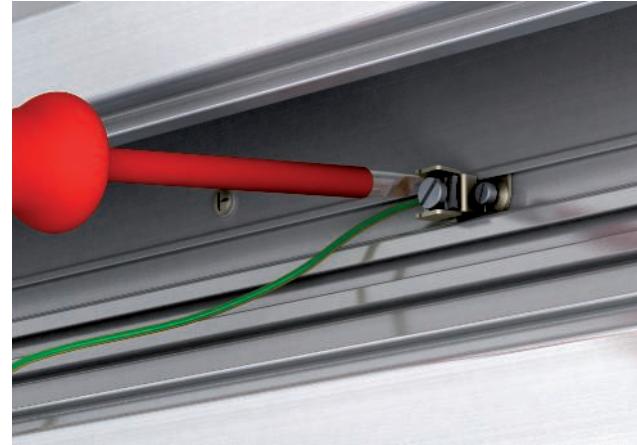

If the trunking is interrupted at a wall penetration, then continuation of the protective measures is required, as the trunking forms a foreign, conductive part in this case, which spreads through different areas of a building.

With the LKM metallic cable routing trunking, the connection between the cover and base is made without an additional earthing cable. Joint connectors guarantee equipotential bonding between the bases.

Important: Powder-coated metallic covers do not count as mixed construction and are thus not considered as insulating! They should therefore be included in the protection measures. The sheet steel partition is self-contacting. The shielding measure reduces electro-smog and generally achieves improved EMC protection. Protective conductor connections should be created permanently. If there is a change to the system, e.g. for retro-installations, it is important to guarantee the maintenance of the protective functions.

How can I work out the cable volume?

Cable diameter and space required; 1 = diameter in mm, 2 = space required in cm²

An important criterion for the selection of the right trunking size of the underfloor system is the cable volume. As the cables are never packed tightly together or are absolutely parallel, it is not enough to base the volume calculation solely on the cable diameter. A realistic calculation is provided by the formula $(2r)^2$. To simplify your work, we have listed the diameters and space requirements of the most important cable types on this double page. Important: the values are average values, which may vary between manufacturers. Please refer to the manufacturer's specifications for the exact values.

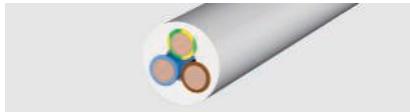

The right choice

The table on the next pages will help you to select the correct trunking size. Besides the usable cross-section of the appropriate trunking, please observe the current DIN/VDE standards for the fill factor and the approved cable heating.

Calculation with the formula $(2r)^2$

The diameter says little about the actual space required by a cable. Calculate: $(2r)^2$. This value reflects the realistic space requirements, including the compartments.

Processing materials with the correct tool

Different materials must be processed differently. Chop saws have proved to be very useful when laying device installation trunking. This allows exact cutting.

For trunking made of PVC and PC/ABS:

- Hand saw, fine-tooth (iron saw)
- Piercing saw with iron or plastic saw blade with fine teeth
- Circular saw with plastic saw blade, 350 mm diameter, 80–108 teeth/inch and 2,800 rpm

For ducts and trunking made of sheet steel and aluminium:

- Ribbon saw with saw ribbon for hard metals
- Circular saw with saw blade for hard metals, 350 mm diameter, 80–108 teeth/inch and 2,800 rpm
- Angle grinder with metal separating disc

Thermal expansion coefficient:

- Steel: 14×10^{-6} 1/K
- Aluminium: 23.1×10^{-6} 1/K
- Hard PVC: 71×10^{-6} 1/K

Take the length expansion of the materials into account

Different materials expand differently and this must be taken into account. The expansion of the materials PVC, steel and aluminium can be calculated using the formula below.

$$\Delta L = L \cdot \alpha \cdot \Delta T$$

L = Length m

α = Thermal expansion co-efficient

ΔT = Temperature change

Examples

At a temperature difference ΔT of 20 °C, the 2,000 mm standard length changes as follows:

- For hard PVC, 2.84 mm
- For steel, 0.56 mm
- For aluminium, 0.924 mm

Perfect interplay for more efficient working

Faster and better installation sequences – this is the aim of both ourselves and the manufacturers of electrical devices. Previously used bolt-firing devices have thus become modern nail guns. With its Pulsa 700E, Spit can offer devices of the highest quality for this area of the electrical industry. Many OBO products can be processed particularly efficiently using the devices. This is proved by tests for mounting cable and device installation trunking, carried out with Spit devices.

Properties of the hard PVC used

Property	Value	DIN
Material designation	PVC-U-E-D-08-04-28	to DIN 7748
Tensile strength	min. 40 N/mm ²	to DIN 53 455
Crack expansion	min. 85%	to DIN 53 455
Breakdown voltage	min. 20 KV/mm	to DIN 53 481
Surface resistance	min. 1010 Ohm	to DIN 53 455
Shape heat resistance	min. 75 °C	to DIN 53 400/B
Temperature resistance in the application	max. 65 °C	
Flammability	Level V0	to UL 94

You can find more details in the chapter "Chemical resistance of hard PVC" in the "Additional information" part.

Halogen-free cable routing systems

This is what it's all about:

- If there is a fire, halogen-free materials reduce the amount of toxic smoke gases. They do not create any corrosive substances.
- In many public buildings, insurance companies require halogen-free materials to protect people and property.
- Particularly in public areas, halogen-free OBO cable routing systems are a safe choice.

Low smoke gas production, low corrosion, safe. Halogen-free installation materials belong in any fire protection plan.

Dangerous smoke gases from plastics

Plastics have good insulating properties and can be processed easily. However, during a fire they can create aggressive gases. A danger to people and property.

Heavy smoke creation

Flame-protection agents, based on halogen compounds such as fluorine, iodine, chlorine and bromine, are used to keep the flammability of PVC low. If there is a fire, this safety aspect becomes a dangerous disadvantage: toxic smoke gases, such as carbon dioxide and carbon monoxide, are created. These usually endanger people far faster than flames and heat. For example, in the fire catastrophe at Düsseldorf Airport in 1996 or in the Tauern Tunnel in 1999, considerable quantities of burned plastics contributed to the formation of smoke and hazardous substances. A highly toxic mixture, which can be lethal after just a few breaths.

Protecting existing buildings better

To ensure increased protection of properties in the event of fire and to prevent subsequent fire damage and costs, halogen-free cable routing systems (made of PC/ABS) must be installed in many public buildings. Standard PVC releases corrosive hydrogen chloride gas, which, in conjunction with the moisture of the extinguishing water, produces hydrochloric acid. Hydrochloric acid presents a wealth of risks: On the one hand, it is harmful to health, as it irritates the respiratory passages and, on the other hand, it attacks buildings because it eats its way through metals and, as an electrically conductive substance, can lead to short circuits. This is why all the halogen-free cable routing systems meet the requirements of DIN EN 50085.

OBO halogen-free cable routing systems protect people, the environment and property. All the products are made from high-quality PC/ABS (polycarbonate/acrylonitrile butadiene styrene). This material is one of the self-extinguishing plastics.

For safe cable routing, OBO offers halogen-free WDKH wall and ceiling trunking and Rapid 80 device installation trunking. Both cable routing systems are available in all the standard dimensions. They are easy to mount, and are stable, are produced to a high level of quality and are dimensionally stable.

The safety aspects

- Low smoke creation
- Low toxicity of the smoke gases
- Scarcely any release of corrosive gases
- Perfectly suitable for public areas

Rapid 80 GKH halogen-free

Rapid 80 device installation trunking allows flexible and quick access to energy and data on the wall. It is primarily used in public facilities and offices.

WDKH halogen-free

OBO wall and ceiling trunking ensures safe cable routing. It can be used as wall or ceiling trunking.

Individual special colours

Plastic trunking

The wide range of standard colours and the many possible special colours mean that it is possible to integrate the colour of the cable routing systems into any office landscape. The plastic cable routing trunking and device installation trunking systems are available in the RAL colours pure white (RAL 9010), light grey (RAL 7035), grey (RAL 7030) and cream (RAL 9001) as standard.

Sheet steel and aluminium trunking

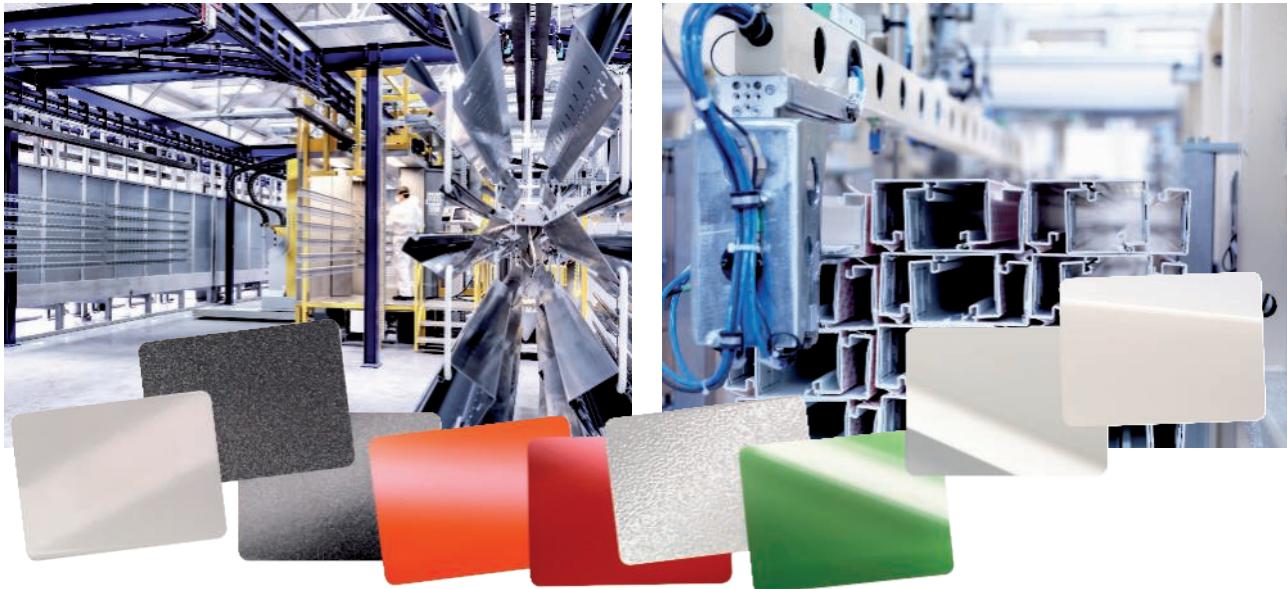

The device installation trunking systems and service poles are made of sheet steel or aluminium and are available in the standard colours pure white, light grey and cream. Powder coating means that all the other RAL colours are possible on sheet steel and aluminium trunking. Alternatively to the RAL standard, both NCS and DB colours can be applied on request.

Colour deviations

Material-dependent colour deviations may occur on PVC trunking and fittings. This is caused by the differences in gloss on each individual surface. They only absorb a part of the light. "Silky matt" painted surfaces and "matted" surfaces on moulded parts have different structures and thus different levels of gloss. Absolute evenness is impossible. With a shiny surface, a colour appears lighter (greater reflection) and, with a matt surface, darker (greater absorption). Measurement of the differences is therefore extremely difficult.

Powder coatings for indoor use

Versatile. Attractive. Robust.

Powdered surface coatings offer a wide range of options. They turn a standard product into an individual solution, whose colour and function are matched exactly to your requirements. The colour and structure ensure a decorative exterior, whilst the coating properties offer high resistance to chemicals, very good corrosion protection and the best possible insulation properties.

Plastic materials

ABS/ ASA	Acrylonitrile butadiene styrene
Temperature resistance:	To about minus 40 °C*, permanently up to 70 °C, briefly up to 85 °C
Resistant to:	Formic acid, citric acid, lactic acid
Unstable with:	Acetone, petrol, benzene, solvents for paints and butyric acid, chlorine, acetic acid, nitric acid.
Conditionally resistant to:	Hydrochloric acid, sulphuric acid.
Risk of stress cracks:	Relatively high, similar to polystyrene.
PA	Polyamide
Temperature resistance:	Permanently up to approx. 90 °C, briefly up to around 130 °C, and to around minus 40 °C*
Resistant to:	Petrol, benzene, diesel oil, acetone, solvents for paints and lacquers, oils and greases
Unstable with:	Bleach, most acids, chlorine.
Risk of stress cracks:	Low in humid conditions; only with some aqueous salt solutions. Highly desiccated parts (high temperature and extremely low air humidity) are highly sensitive to fuels and various solvents.
PA/ GF	Polyamide, fibreglass reinforced
Temperature resistance:	Permanently up to approx. 100–110 °C, briefly up to around 160 °C, and to around minus 40 °C*
Resistant to:	Petrol, benzene, diesel oil, acetone, solvents for paints and lacquers, oils and greases. Slightly susceptible to stress cracking.
Unstable with:	Bleach, most acids, chlorine.
Risk of stress cracks:	Low in humid conditions; only with some aqueous salt solutions. Highly desiccated parts (high temperature and extremely low air humidity) are highly sensitive to fuels and various solvents.
PBPT	Polybutylene terephthalate
Temperature resistance:	Permanently up to approx. 120 °C, briefly up to around 140 °C and to around minus 40 °C*.
Resistant to:	Petrol, diesel oil, most weak acids, oils and greases.
Unstable with:	Strong acids, chlorine, fluorine, bromine vapour, bleach, trichloroethylene, methylene chloride.
Conditionally resistant to:	Acetone, ammonia, benzene.
PE	Polyethylene
Temperature resistance:	Hard types permanently up to approx. 90 °C, briefly up to approx. 105 °C, soft types permanently up to approx. 80 °C, briefly up to approx. 100 °C and to approx. minus 40 °C*.
Resistant to:	Alkalies and inorganic acids.
Unstable with:	Chlorine, hydrocarbons, oxidising acids.
Conditionally resistant to:	Acetone, organic acids, petrol, benzene, diesel oil, most oils.
Risk of stress cracks:	Stress cracks can be caused by, among other things, acetone, various alcohols, formic acid, ethanol, petrol, benzene, butyric acid, acetic acid, formaldehyde, various oils, petroleum, propanol, nitric acid, hydrochloric acid, sulphuric acid, soap solutions, turpentine, trichloroethylene, citric acid.
PP/GF	Polypropylene, fibreglass reinforced
Temperature resistance:	Permanently up to approx. 90 °C, briefly up to around 110 °C, and to around minus 30 °C. Chem. resistance generally as for polyethylene
Resistant to:	Alkalies and inorganic structures
Unstable with:	Chlorine, hydrocarbons, oxidising acids.
Risk of stress cracks:	Low, only with some acids such as chromic acid, hydrofluoric acid and hydrochloric acid, as well as nitrogen oxide.

PC	Polycarbonate
Temperature resistance:	Permanently up to approx. 110 °C (in water 60 °C), briefly up to 125 °C, and to below minus 35 °C*
Resistant to:	Petrol, turpentine, most weak acids.
Unstable with:	Acetone, benzene, chlorine, methylene chloride, most concentrated acids.
Risk of stress cracks:	Relatively low, media which can cause tension cracking include petrol, aromatic hydrocarbons, methanol, butanol, acetone, turpentine.
PC/ ABS	Polycarbonate/acrylonitrile butadiene styrene
Temperature resistance:	-30 °C to + 90 °C, briefly up to approx. 105 °C, melting range at approx. 200 °C, thermal decomposition at 300 °C. Material thicknesses of 1.5 mm or more can achieve UL94 V-0. At material thicknesses of 1 mm or more, the glow wire temperature of 960 °C according to IEC 60695-2-12 is achieved.
Resistant to:	Mineral acids, organic acids and aqueous salt solutions
Conditionally resistant to:	Alkalies, hydrocarbons, aromatics and (in trace form) a series of greases and oils.
POM	Polyacetal
Temperature resistance:	Permanently up to approx. 100 °C, briefly up to around 130 °C and to around minus 40 °C*
Resistant to:	Acetone, ether, petrol, weak acetic acid, benzene, heating oil, oils and greases, toluene.
Unstable with:	Methylene chloride, trichloroethylene, hydrochloric acid, nitric acid, sulphuric acid.
Risk of stress cracks:	Low
PP	Polypropylene
Temperature resistance:	Permanently up to approx. 90 °C, briefly up to around 110 °C, and to around minus 30 °C. Chemical resistance generally as for polyethylene.
Resistant to:	Alkalies and inorganic acids.
Unstable with:	Chlorine, hydrocarbons, oxidising acids.
Conditionally resistant to:	Acetone, organic acids, petrol, benzene, diesel oil, most oils.
Risk of stress cracks:	Low, only with some acids such as chromic acid, hydrofluoric acid and hydrochloric acid, as well as nitrogen oxide.
PS	Polystyrene
Temperature resistance:	Because of its relatively high sensitivity to the effects of chemicals, its use is not recommended at temperatures above normal room temperature, about 25 °C. Resistance to cold: to about minus 40 °C*.
Resistant to:	Alkalies, most acids, alcohol.
Unstable with:	Butyric acid, concentrated nitric acid, concentrated acetic acid, acetone, ether, petrol and benzene, solvents for paints and lacquers, chlorine, diesel fuel.
Conditionally resistant to:	Oils and greases.
Risk of stress cracks:	Relatively high. Stress cracks can be caused by, among other things, acetone, ether, petrol, cyclohexane, heptane, methanol, propanol and the softeners of some mixes used in PVC cables.

PVC	Polyvinyl chloride
Temperature resistance:	Permanently up to approx. 65 °C, briefly up to around 75 °C and to around minus 30 °C.
Resistant to:	Weak acids, alkalis, oils and greases, petrol
Unstable with:	Strong acids, benzene, acetone, iodine, toluene, trichloroethylene.
Risk of stress cracks:	Low, only with some solvents such as benzene and acetone.
Material designation according to DIN 7748:	PVC-U-E-D-080-04-28
Tensile strength to DIN 53 455:	Min. 40 N/mm ²
Elongation at tear according to DIN 53 455:	Min. 65%
Impact resistance according to DIN 53 481:	Min. 20 KV/mm
Surface resistance according to DIN 53 482:	Min. 10 10
Thermoforming resistance according to DIN 53 460/B:	Min. 75 °C
Flammability according to UL 94:	Level V0
Fire behaviour according to EN 13501-1	C-s3,d0

The minus values apply only for parts in the idle condition with no severe impact stress. There is no plastic that is resistant to every chemical. The agents listed are only a small selection. Plastic parts are especially at risk in the presence of chemicals and high temperatures. Stress cracks may occur. If in doubt, please consult us and/or ask for a detailed chemical resistance table. Stress crack formation: Stress cracks may occur if plastic parts under

tension are exposed to chemicals at the same time. Parts made of polystyrene and polyethylene are particularly susceptible. Stress cracks may even be caused by agents to which the plastic in question is resistant in the absence of stress. Typical examples of parts under constant stress when used as intended: grip clips, intermediate connectors of cable glands, ribbon clips.

Rapid 45-2 device installation trunking, plastic

Plastic device installation trunking, trunking width 100 mm 32

Plastic device installation trunking, trunking width 130 mm 42

Plastic device installation trunking, trunking width 165 mm 46

System description

The new Rapid 45 generation unites a symmetrical design, homogeneous colour quality and technical flexibility in a single system. Innovative fittings allow practical wall installation in administrative buildings, commercial areas and in industry. In four dimensions, the Rapid 45-2 device installation trunking offers a wide range of applications.

Rapid 45-2 combines straightforward design and the highest quality with perfect handling in termination and processing. Accessory parts, such as end pieces or variable fittings, fit both the plastic and also the aluminium trunking.

Mounting aid

Office application area

The many practical fittings permit easy integration of the Rapid 45-2 device installation trunking system into any office situation. Switches, sockets and data technology are simply clicked into place.

Cut trunking

The Rapid 45-2 PVC device installation trunking can be processed using a standard coping saw, whilst the Rapid 45-2 aluminium trunking should be cut with an electrical circular or coping saw.

Mounting of trunking

The Rapid 45-2 device installation trunking can be mounted quickly on the wall, for example, using knock-in anchors.

Mounting of variable fittings

The variable fittings allow an attractive cover, even for corners which are not at a right angle. Fixing takes place in the cover contour.

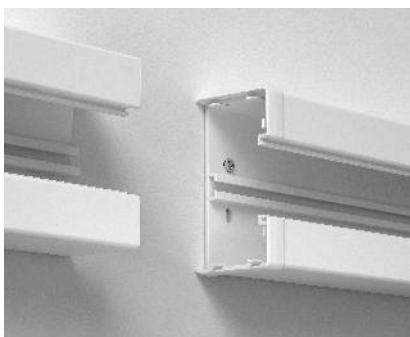

Mounting of fixed fittings

The fixed fittings are integrated in the trunking base installation.

Mounting of joint connectors

The joint connectors can be separated from their stalk and serve both as a joint connector and a joint cover to conceal cut edges.

Mounting of joint cover

The joint cover is attached to the trunking bases. This provides an optically attractive connection for the trunking bases.

Mounting of joint connectors

In this way, the joint connectors can be used for both PVC trunking and aluminium trunking.

Mounting of end piece

The end piece is attached to the C profile rail on the trunking base. A spring attached to the end piece locks it securely in place.

Installation of socket

The cables are connected to the socket.

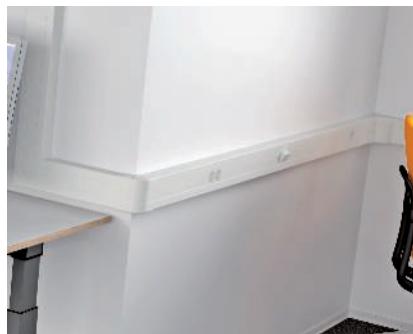

Mounting of socket

The socket is pushed into the Rapid 45-2 device installation trunking without additional aids.

Mounting of socket

The module socket locks into the cover contour.

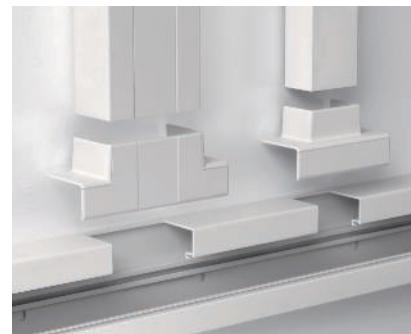

Installation complete

The flexibility ensures clean and quick installation.

Earthing of aluminium Rapid 45

The cover for the aluminium trunking system consists of a PVC base profile and an aluminium screen and thus need not be connected conductively to the trunking base.

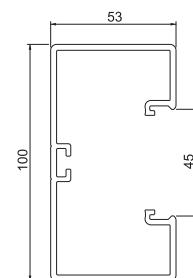

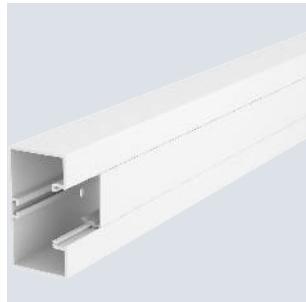

Mounting of T piece adapter

Easy-to-mount hood fittings are available for creating rising and falling T pieces.

System description

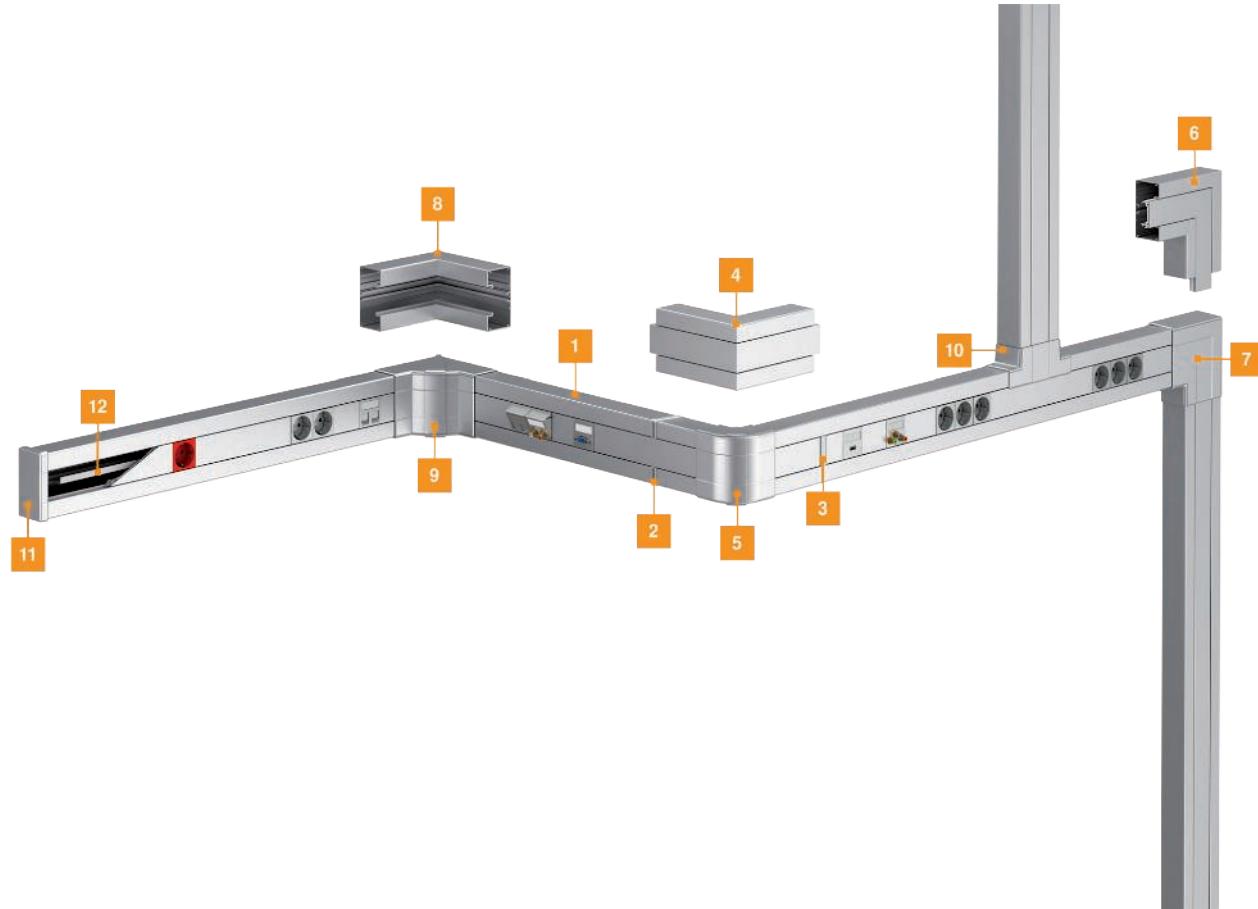

The new Rapid 45 generation unites a symmetrical design, homogeneous colour quality and technical flexibility in a single system. Innovative fittings allow practical wall installation in administrative buildings, commercial areas and in industry. In four dimensions, the Rapid 45-2 device installation trunking offers a wide range of applications.

Rapid 45-2 combines straightforward design and the highest quality with perfect handling in termination and processing. Accessory parts, such as end pieces or variable fittings, fit both the plastic and also the aluminium trunking.

Mounting aid

Office application area

The many practical fittings permit easy integration of the Rapid 45-2 device installation trunking system into any office situation. Switches, sockets and data technology are simply clicked into place.

Cut trunking

The Rapid 45-2 PVC device installation trunking can be processed using a standard coping saw, whilst the Rapid 45-2 aluminium trunking should be cut with an electrical circular or coping saw.

Mounting of trunking

The Rapid 45-2 device installation trunking can be mounted quickly on the wall, for example, using knock-in anchors.

Mounting of variable fittings

The variable fittings allow an attractive cover, even for corners which are not at a right angle. Fixing takes place in the cover contour.

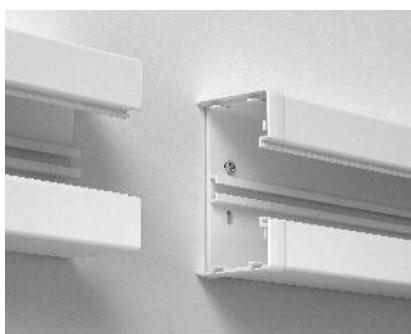

Mounting of fixed fittings

The fixed fittings are integrated in the trunking base installation.

Mounting of joint connectors

The joint connectors can be separated from their stalk and serve both as a joint connector and a joint cover to conceal cut edges.

Mounting of joint cover

The joint cover is attached to the trunking bases. This provides an optically attractive connection for the trunking bases.

Mounting of joint connectors

In this way, the joint connectors can be used for both PVC trunking and aluminium trunking.

Mounting of end piece

The end piece is attached to the C profile rail on the trunking base. A spring attached to the end piece locks it securely in place.

Installation of socket

The cables are connected to the socket.

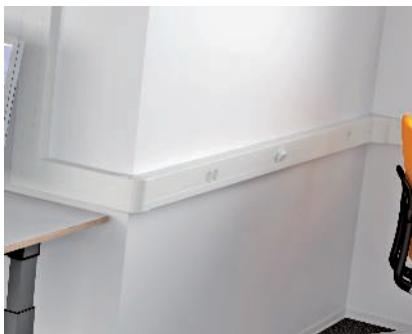

Mounting of socket

The socket is pushed into the Rapid 45-2 device installation trunking without additional aids.

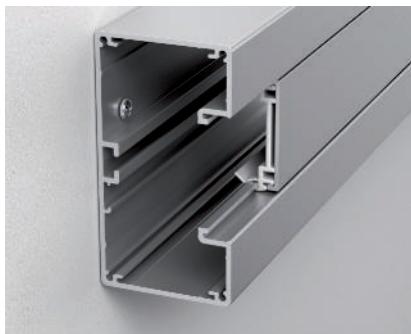

Mounting of socket

The module socket locks into the cover contour.

Installation complete

The flexibility ensures clean and quick installation.

Earthing of aluminium Rapid 45

The cover for the aluminium trunking system consists of a PVC base profile and an aluminium screen and thus need not be connected conductively to the trunking base.

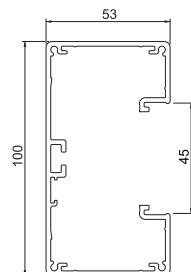

Mounting of T piece adapter

Easy-to-mount hood fittings are available for creating rising and falling T pieces.

System description

Rapid 80 is the right choice in any location where there is a lot to install. Functionality and an attractive appearance simply go well together in this device installation trunking. The clear advantage is also its flexibility. The right system is available for every building.

Rapid 80 combines design and function into a single system in a fuss-free and convincing manner. Thanks to the consistent standardisation of system components, the three types of trunking can either be used as individual variants or in combination.

Mounting aid

GK flexible office installation

The large product range of fittings and installation options allows flexible installation, for which changes and additions are not a problem.

GK coupling mounting

The coupling of the GK device installation trunking is contained in the scope of delivery and is pre-mounted. It is pulled out of the trunking and automatically locks in the correct position. This allows simple mounting of additional trunking sections.

GK/GS/GA coupling mounting

A coupling pair must be ordered separately to connect two trunking bases.

GK/GS/GA coupling mounting

Insert the coupling in the top part of the device installation trunking and push it into the trunking. This automatically locks the coupling and, at the same time, the equipotential bonding is created between the two trunking bases.

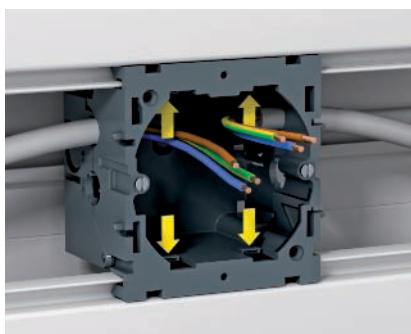

GK/GS/GA accessory mounting box mounting

Lock the accessory mounting boxes of series 71GD... into the cover contour. They can be moved lengthwise in the trunking.

Accessory mounting box mounting

All the front-locking accessory mounting boxes of the 71GD... series can simply be inserted into the system opening of the Rapid 80 GK, GS and GA device installation trunking from the front.

Check of locking lugs

Together with vertically aligned convection grids, the connection profile is locked onto the wall brackets before mounting the GEK-S device installation trunking.

Installation of device installation trunking on wall bracket

The accessory mounting boxes must be secured against movement, in accordance with the table. This is done by mounting the covers, which come very close to the accessory mounting boxes.

GK/GS/GA device mounting

Switching and connection devices of all well-known manufacturers can be used. If a particularly large amount of space is required for the use of, for example, data boxes, various mounting supports are available without protective housings.

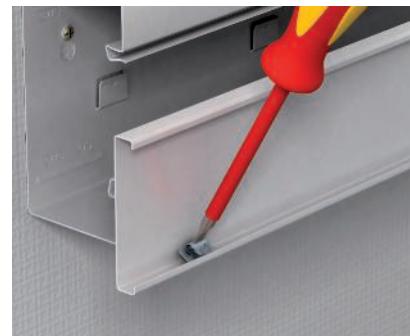

GK/GS/GA accessory mounting box mounting

The real trunking opening width of 76.5 mm ensures that even switches of a greater external radius do not leave visible openings between the top trunking cover and the series cover.

GK/GS/GA Modul 45® device installation

The Modul 45® accessory mounting box system and the appropriate covers of the S990 series allow space- and time-saving installation in all the device installation trunking systems and service poles.

GS/GA cover earthing

With cut covers, the locking brackets can be installed at a later date as necessary. They must be mounted at a distance of 50 mm from the end of the cover.

GS/GA cover earthing

The self-contacting cover earthing guarantees continuous protection without any additional wiring. The locking brackets are pre-mounted in the cover.

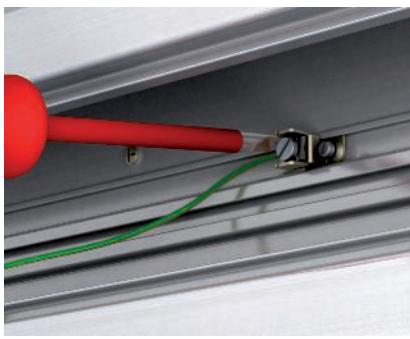

GK/GS/GA duct clamp mounting

Together with the partition, the trunking clamp prevents the cables from falling out and supports the stability of the systems when the upper parts are inserted.

GS mounting of protective conductor connection bracket

The protective conductor connection bracket is turned into the appropriate recesses in the trunking base and fastened using a screwdriver.

GA mounting of protective conductor connection bracket

The protective conductor connection bracket is turned into the appropriate C rail in the trunking base and fastened using a screwdriver.

GK/GS end piece components

The end piece consists of a fastening element and a screen. The screen guides are suitable for each trunking type (symmetrical, asymmetrical or duoduct) as well as left and right end pieces. The pictograms on the screen help to select the appropriate guide.

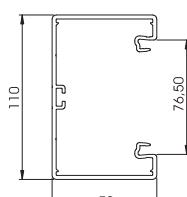

GK/GS end piece mounting

Place the pre-mounted end piece on the trunking and fix it to the trunking using the two bolts. Then mount the cover.

System description

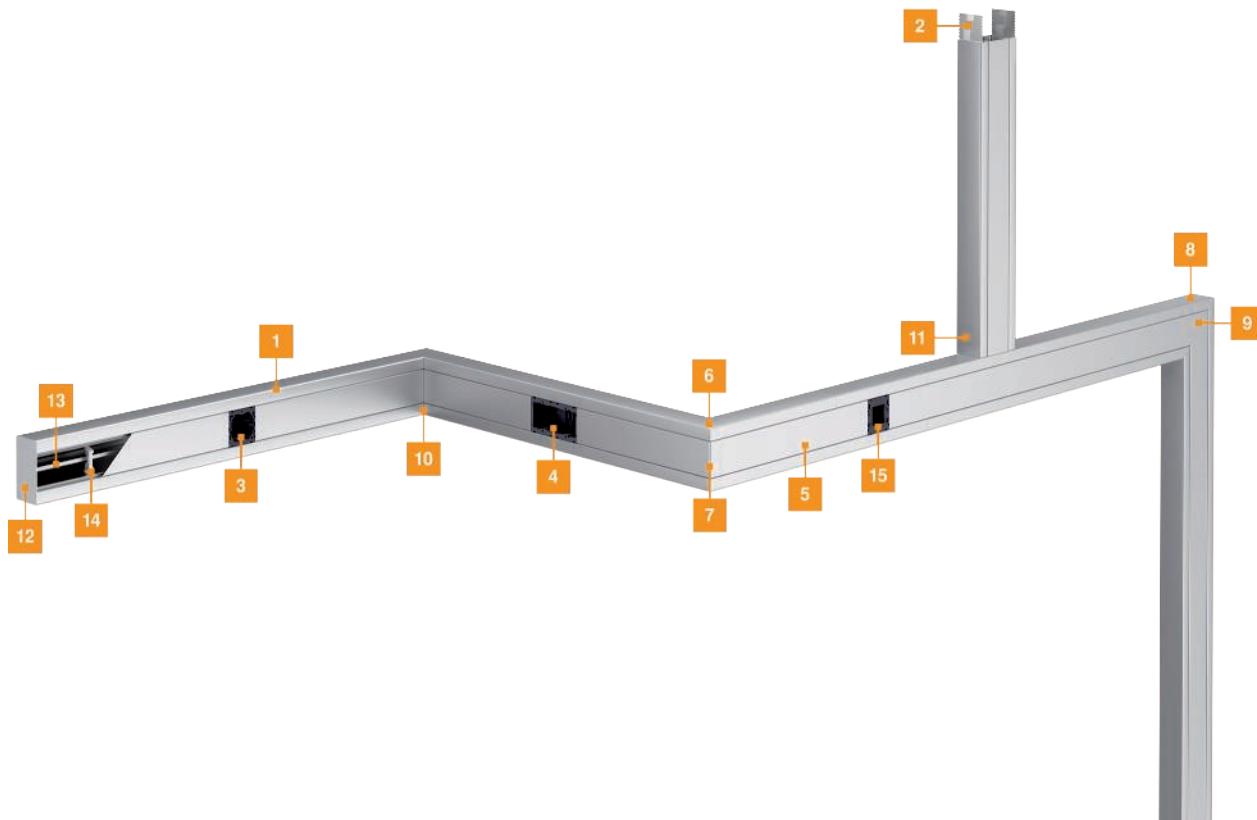

Rapid 80 is the right choice in any location where there is a lot to install. Functionality and an attractive appearance simply go well together in this device installation trunking. The clear advantage is also its flexibility. The right system is available for every building.

Rapid 80 combines design and function into a single system in a fuss-free and convincing manner. Thanks to the consistent standardisation of system components, the three types of trunking can either be used as individual variants or in combination.

Mounting aid

GK flexible office installation

The large product range of fittings and installation options allows flexible installation, for which changes and additions are not a problem.

GK coupling mounting

The coupling of the GK device installation trunking is contained in the scope of delivery and is pre-mounted. It is pulled out of the trunking and automatically locks in the correct position. This allows simple mounting of additional trunking sections.

GK/GS/GA coupling mounting

A coupling pair must be ordered separately to connect two trunking bases.

GK/GS/GA coupling mounting

Insert the coupling in the top part of the device installation trunking and push it into the trunking. This automatically locks the coupling and, at the same time, the equipotential bonding is created between the two trunking bases.

GK/GS/GA accessory mounting box mounting

Lock the accessory mounting boxes of series 71GD... into the cover contour. They can be moved lengthwise in the trunking.

Accessory mounting box mounting

All the front-locking accessory mounting boxes of the 71GD... series can simply be inserted into the system opening of the Rapid 80 GK, GS and GA device installation trunking from the front.

Check of locking lugs

Together with vertically aligned convection grids, the connection profile is locked onto the wall brackets before mounting the GEK-S device installation trunking.

Installation of device installation trunking on wall bracket

The accessory mounting boxes must be secured against movement, in accordance with the table. This is done by mounting the covers, which come very close to the accessory mounting boxes.

GK/GS/GA device mounting

Switching and connection devices of all well-known manufacturers can be used. If a particularly large amount of space is required for the use of, for example, data boxes, various mounting supports are available without protective housings.

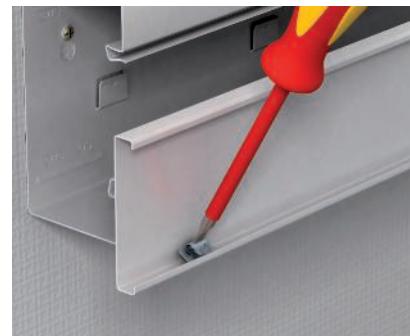

GK/GS/GA accessory mounting box mounting

The real trunking opening width of 76.5 mm ensures that even switches of a greater external radius do not leave visible openings between the top trunking cover and the series cover.

GK/GS/GA Modul 45® device installation

The Modul 45® accessory mounting box system and the appropriate covers of the S990 series allow space- and time-saving installation in all the device installation trunking systems and service poles.

GS/GA cover earthing

With cut covers, the locking brackets can be installed at a later date as necessary. They must be mounted at a distance of 50 mm from the end of the cover.

GS/GA cover earthing

The self-contacting cover earthing guarantees continuous protection without any additional wiring. The locking brackets are pre-mounted in the cover.

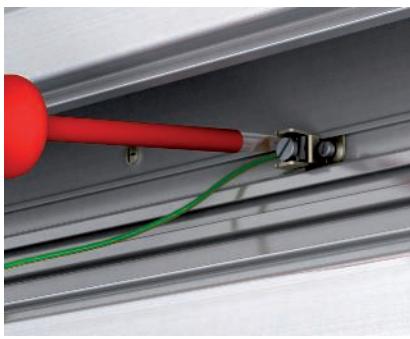

GK/GS/GA duct clamp mounting

Together with the partition, the trunking clamp prevents the cables from falling out and supports the stability of the systems when the upper parts are inserted.

GS mounting of protective conductor connection bracket

The protective conductor connection bracket is turned into the appropriate recesses in the trunking base and fastened using a screwdriver.

GA mounting of protective conductor connection bracket

The protective conductor connection bracket is turned into the appropriate C rail in the trunking base and fastened using a screwdriver.

GK/GS end piece components

The end piece consists of a fastening element and a screen. The screen guides are suitable for each trunking type (symmetrical, asymmetrical or duoduct) as well as left and right end pieces. The pictograms on the screen help to select the appropriate guide.

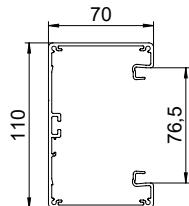

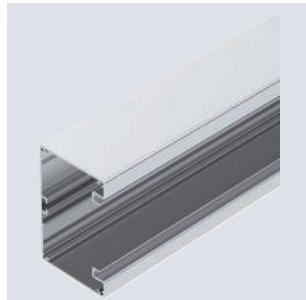

GK/GS end piece mounting

Place the pre-mounted end piece on the trunking and fix it to the trunking using the two bolts. Then mount the cover.

Fastening panel for mounting device installation trunking on skirting board constructions and as a support for the convection grid. The fastening panel can be used for all Rapid 80 device installation trunking systems of type GK, GS and GA. When mounting plastic GK device installation trunking, the matching wall panel adapter is also required. The connection profile is required for mounting double trunking of type GS-D70170 and GS-D90170, as well as for GS trunking with a nominal width of 210 mm.

The mesh slats are simply attached to the slat holder.

System description

Service poles

In modern offices, technology must be completely flexible and also aesthetically pleasing. The solution: OBO's service pole systems. They allow free positioning of power supply points near workstations. The location can be changed at any time. This gives both users and architects the greatest possible freedom.

In open-plan offices and administrative buildings, as well as in cash desk areas of shops or in production facilities, they provide more order. ISS service pole systems fulfil all the technical and architectural requirements of modern cable routing and make an active contribution to the interior architecture.

Selection criteria

<p>Application</p> <p>Floor-ceiling service poles The poles can be positioned anywhere in the room. The poles are braced against the ceiling using a clamping device to ensure a secure hold. This is concealed by the false ceiling.</p> <p>Floor service poles These poles are mounted directly onto the floor and supplied from below, e.g. through an underfloor system or through cavity/raised floors.</p>	
<p>Requirements</p> <p>Number of installation devices When choosing the correct service pole, it is important to specify the number of switching and connection devices in order to determine the installation space. For example, a 2-compartment service pole, such as the ISS140110, provides a large amount of installation space.</p>	
<p>Design</p> <p>Round and oval, square or rectangular The OBO ISS service pole range offers a solution for any design. The service poles, primarily available in white or aluminium anodised designs, are available on request in all possible RAL shades.</p>	

Mounting aid

Service poles, sheet steel

Clamping service poles

The service pole is tensioned between the ceiling and floor at the stand, using a wrench.

Connection of the service pole in a false ceiling

The connection cables are fed into the service pole through the top opening of the telescopic profile.

Equipotential bonding of the service pole

The continuous equipotential bonding between the cover and base is made automatically via the locking brackets in the closing contour.

Service poles with clamping device

Screwing the service pole to the floor

If the service pole is to be screwed to the floor, then the existing floor panel can be removed and replaced with a larger floor plate. The service pole can now be fastened to the floor using bolts and anchors.

Mounting of the clamping device

The cover of the service pole is removed and the clamping device screwed on.

Clamping device features

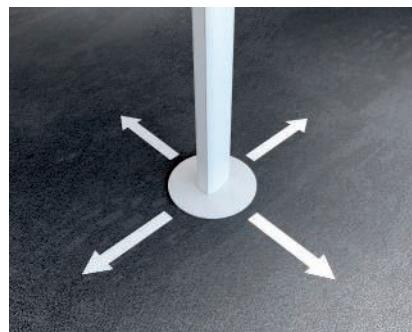

The telescopic clamping device is extended by repeatedly pressing the lever and it clamps the pole between the floor and ceiling. Optionally, the clamping device can also be screwed to the ceiling.

Service pole with hose to ceiling

Stable stand

The service poles with a hose to the ceiling are fitted with a large floor plate in order to ensure safe and stable positioning.

Variable positioning

Poles with hose to the ceiling can be moved at a later point within a radius of approx. 1.5 m.

Connecting service poles to a Consolidation Point

The service poles are supplied with data and power cables via the false ceiling. A Consolidation Point is a suitable connection point.

Floor service poles

Screwing the floor service pole to the floor

The floor service pole is fastened to the floor using bolts and anchors.

Connecting floor service poles to a raised floor

The floor service pole can be supplied with power and data cables via a raised floor. A UVS power supply is a suitable connection point.

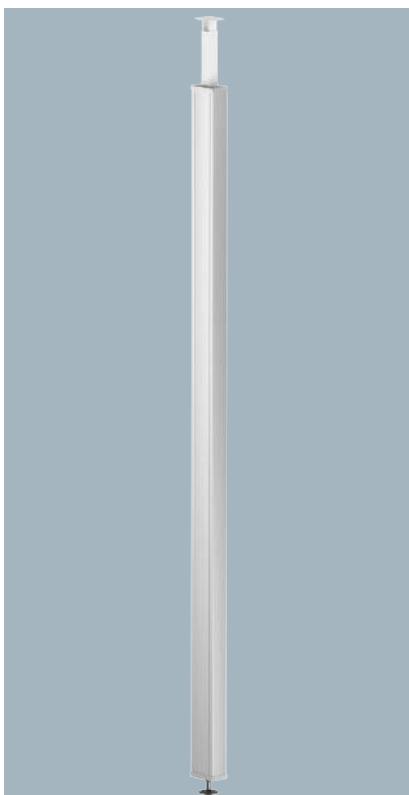

Connecting floor service poles to an underfloor system

The floor service pole can be connected to an underfloor system. Power is fed in through an underfloor box.

System description

Service poles

Our industrial service poles combine power, data and compressed air connections in a compact and sturdy manner. This makes changes of location, for example when adjusting production processes, particularly quick and easy. Thanks to the modular set-up, it is easy to

equip the service poles according to the new requirements. The ISS basic profile is fully compatible with all known item MB Building Kit Systems.

Mounting in the system opening

The 76.5 mm system opening accommodates device installation sockets of the series 71GD... In addition to common systems from other manufacturers, the complete OBO product range stands ready for installation:

- Switching and connection devices
- CEE connection units 16 A/32 A
- Data technology from all manufacturers
- Multimedia (audio, video, VGA, XLR etc.)
- Installation units IKR4 and IKR6 as series installation devices
- Pre-terminated “plug and play” solutions with ready-to-connect connection cables

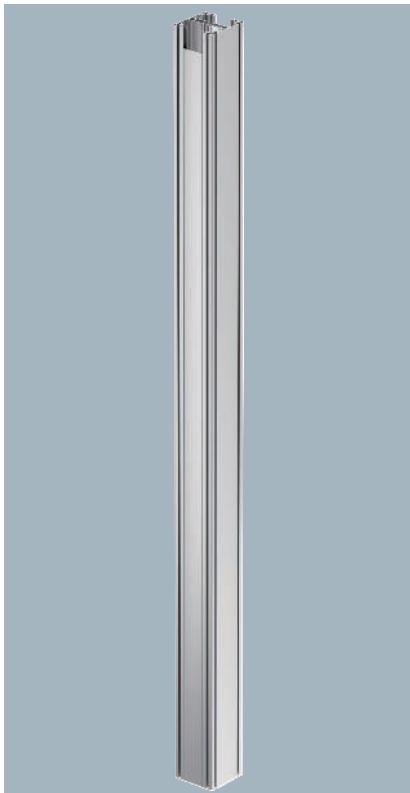

Mounting in the groove rail

The service pole has one groove rail to every side, aligned to the established item grid dimensions. This means, there are no limitations with regards to adapting all kinds of different expansion elements and integrating the poles into machine and plant constructions. The channel rail provides the option to attach

- Monitors
- Keyboards
- Reading, transmitting and receiving equipment
- Fixed or flexible pipelines for compressed air or gases

ISS service pole for the equipment of assembly workstations in production sites. The anodised heavy-duty aluminium profile has a 76.5 mm system opening on two opposite sides for accepting front-locking mounting accessory boxes of the series 71GD or mounting supports of the series 71MT. All four sides of the profile have a mounting groove in the standard nominal size 8 for installing various expansion parts for additional functions (Building Kit Systems). The scope of delivery comprises the pole profile as well as the necessary covers for the system openings in 2,000 mm lengths and a PE bag with 20 additional locking brackets, type RKV3V, to enable you to create partial lengths of the covers. Two closed trunking channels inside the profile are ideal for conduction of compressed air.

Solid sheet-steel housing

Flexibility through modular structure

Adaptable and universally usable

Flexible – individual – decentralised protection

The requirements for equipping training rooms and classrooms are rising constantly and must be taken into account in new buildings and renovations. The combination of individual equipment and centrally controlled systems can be implemented optimally with media and communication poles. Everything necessary can be included in the pole, from the securing of electrical systems, individual light control, supplying information from central communication and emergency call systems, through to displaying the time.

Fastening panel for mounting device installation trunking on skirting board constructions and as a support for the convection grid. The fastening panel can be used for all Rapid 80 device installation trunking systems of type GK, GS and GA. When mounting plastic GK device installation trunking, the matching wall panel adapter is also required. The connection profile is required for mounting double trunking of type GS-D70170 and GS-D90170, as well as for GS trunking with a nominal width of 210 mm.

The mesh slats are simply attached to the slat holder.

Vertical profile connector with guide slits to lock convection grid profiles for the creation of a compact grid unit. The vertical convection grids can run some way down the front side of the trunking, although a gap should be left near the floor for cleaning, or should be run to the floor and fastened with the BVL floor panel. This version represents a variant of the convector panelling. Alternatively to the convection grid profiles, heating convector panelling can also be created with closed sheet steel panelling.

The mesh slats are simply attached to the slat holder.
